

Waterway Health Report Card 2023

Pūharakekenui-Styx River catchment

Christchurch city has more than 200 kilometres of waterways within five main river catchments – Ōtākaro-Avon, Ōtūkaikino, Pūharakekenui-Styx, Ōpāwaho-Heathcote and Huritini-Halswell. We assess the health of each catchment, testing water and sediment quality and monitoring habitat, plants, insects, fish and periphyton such as algae.

Source

Harewood

Report score

D

Elevation

1-19 metres above
sea level

Land use

Semi-rural (parks, reserves, lifestyle blocks and agriculture) and urban (residential, commercial and industrial)

Mouth

Te Riu o Te Aika Kawa/
Brooklands Lagoon

Length

26 kilometres

Assessing waterway health

We measure the health of each waterway using a Water Quality Index (WQI), a Sediment Quality Index (SQI) and the Quantitative Macroinvertebrate Community Index (QMCI).

Water Quality Index (WQI) Score

We use a WQI specific to Christchurch waterways. Each monitoring site is scored against guideline levels for copper, zinc, pH, suspended solids, dissolved oxygen, temperature, ammonia, nitrogen, phosphorous, biochemical oxygen demand and *Escherichia coli*. The median across the catchment is graded:

- A = 90 – 100 (very good)
- B = 80 – 89.9 (good)
- C = 70 – 79.9 (fair)
- D = 40 – 69.99 (poor)
- E = 0 – 39.9 (very poor)

Pūharakekenui-Styx catchment score: B

Sediment Quality Index (SQI) Score

We use a SQI specific to instream sediment of Christchurch waterways. This index is scored against guideline levels for copper, lead, zinc and polycyclic aromatic hydrocarbons. The median across the catchment is graded:

- A = 90 – 100 (very good)
- B = 80 – 89.9 (good)
- C = 70 – 79.9 (fair)
- D = 40 – 69.99 (poor)
- E = 0 – 39.9 (very poor)

Pūharakekenui-Styx catchment score: A

The Pūharakekenui-Styx catchment overall score is D

Credit: Aquatic Ecology Limited

Quantitative Macroinvertebrate Community Index (QMCI) Score

The QMCI assesses the macroinvertebrate species (organisms with no spine) present and their tolerance to pollution, to determine a waterway's likely water quality. The index values are converted to scores for grading the catchment:

- A = 6.00+ (excellent; clean water)
- B = 5.00 – 5.99 (good; likely mild pollution)
- C = 4.00 – 4.99 (fair; likely moderate pollution)
- D = 0 – 3.99 (poor; likely severe pollution)

Pūharakekenui-Styx catchment score: D
