

Planting Guide

Follow these steps to give your plant the best chance of survival

Prepare

Skim off surface vegetation

Dig the hole

Check the size of the hole

Plant

Weed it

Remove plant from the pot

Squeeze pot at base or tap sides with a spade handle.

or

Tear the milk carton at the corner.

Plant it

Put the plant in the hole, hold it upright and fill the hole with loose, crumbly soil to ground level.

Use your fist or foot to compact the soil and create a shallow basin to collect rainwater.

Protect

Keep grass and roots well away from your plant so they don't resprout. If available use a weed mat and cage.

Join in on one of our maintenance days... or come back any time to free your plant from weeds.
